and Growth Alexander E.S. Van Driessche, Matthias Kellermeier, Liane G. Benning, Denis Gebauer, 2018-07-07 In the last decade numerous studies have demonstrated the existence of alternative pathways to nucleation and crystallisation that oppose the classical view. Such proposed scenarios include multistage reactions proceeding via various precursor species and/or intermediate phases. The aim of this book is to review and discuss these recent advances in our understanding of the early stages of mineralisation through a series of contributions that address both experimental and theoretical studies about the formation and nature of initial precursor species e.g. prenucleation clusters, dense liquid phases, amorphous nanoparticles etc. as well as their transformations leading to the stable mineral phase. Several chapters are devoted to cutting edge analytical techniques used for investigating the above processes in situ in real time and at conditions relevant to both natural and industrial processes. At the end of the book the editors summarize the key questions that still need to be addressed in order to establish a complete picture of the nucleation and growth processes involved during the formation of minerals. Hadi, 2012-12-06 Artificial intelligence and expert systems have seen a great deal of research in recent years, much of which has been devoted to methods for incorporating uncertainty into models. This book is devoted to providing a thorough and up-to-date survey of this field for researchers and students. **Organic Narrowband Photodetectors** PECUNIA, 2020-03-28 This book is the first standalone title on organic narrowband photodetectors, providing a comprehensive and up-to-date overview of the field and its applications. Organic Narrowband Photodetectors will benefit researchers and practitioners in optoelectronics, organic semiconductors and related fields, as well as technology enthusiasts and students in physics, electronics, engineering, chemistry, and material science. **DB2 9 for Z/OS** Paolo Bruni, Mike Bracey, Rubina Goolamhussen, Ravikumar Kalyanasundaram, Bart Steegmans, 2009 Locking is the generic term used to refer to the database management system function that is required for managing interprocess concurrency and maintaining data integrity. However, locking is just one of the serialization mechanisms available in IBM DB2 for z/OS. DB2 uses different mechanisms for serialization to achieve its goal of maximizing concurrency without losing integrity with a minimum cost in CPU I/O and storage resources. In this IBM Redbooks publication we review and explore the different serialization mechanisms used in DB2, such as transaction DML locking, claims and drains, restrictive states, latching, and optimistic serialization. This book was written for application developers in order to help them better understand serialization mechanisms and how they influence application design decisions. *Intelligent Projects Using Python* Santanu Pattanayak, 2019-01-31 Implement machine learning and deep learning methodologies to build smart cognitive AI projects using Python. Key Features: A go-to guide to help you master AI algorithms and concepts; 8 real-world projects tackling different challenges in healthcare, e-commerce, and

surveillance Use TensorFlow Keras and other Python libraries to implement smart AI applications

Book Description This book will be a perfect companion if you want to build insightful projects from leading AI domains using Python The book covers detailed implementation of projects from all the core disciplines of AI We start by covering the basics of how to create smart systems using machine learning and deep learning techniques You will assimilate various neural network architectures such as CNN RNN LSTM to solve critical new world challenges You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video to text translation You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs Later you will learn to build AI based recommendation systems a mobile app for sentiment analysis and a powerful chatbot for carrying customer services You will implement AI techniques in the cybersecurity domain to generate Captchas Later you will train and build autonomous vehicles to self drive using reinforcement learning You will be using libraries from the Python ecosystem such as TensorFlow Keras and more to bring the core aspects of machine learning deep learning and AI By the end of this book you will be skilled to build your own smart models for tackling any kind of AI problems without any hassle What you will learn

Build an intelligent machine translation system using seq 2 seq neural translation machines Create AI applications using GAN and deploy smart mobile apps using TensorFlow Translate videos into text using CNN and RNN Implement smart AI Chatbots and integrate and extend them in several domains Create smart reinforcement learning based applications using Q Learning Break and generate CAPTCHA using Deep Learning and Adversarial Learning Who this book is for This book is intended for data scientists machine learning professionals and deep learning practitioners who are ready to extend their knowledge and potential in AI If you want to build real life smart systems to play a crucial role in every complex domain then this book is what you need Knowledge of Python programming and a familiarity with basic machine learning and deep learning concepts are expected to help you get the most out of the book
